Battery System with direct Solar Support

These systems can connect to solar panels without additional hardware. Good for customers who want battery and solar together. (the systems have hybrid inverter and battery system is dc coupled).

Battery System only

These systems are good where customer wants to keep battery system separate to solar system. You have separate hardware for battery, separate hardware for solar. They also useful for cases where customer has existing solar and wants to add battery system without modifying existing system. (the battery system is ac coupled)
